

Position: Engineering Project Designer
Location: Indianapolis, IN and St. Louis, MO
Start Date: May / June 2024

Job description

As a civil engineering graduate, you likely have a passion for the built environment. A career in civil / site development will provide you a front-row seat to commercial, residential, and industrial land development projects across the country.

How do you know if civil / site is the right fit for you? Professionals in civil / site like the fact they remain a well-rounded engineer as projects involve aspects of geotechnical, water resources, environmental, transportation, and construction engineering. And, that no two projects are alike. You will also be well positioned to pass the Principles and Practice of Engineering Exam (PE) to become licensed.

In our 63rd year, Weihe Engineers is a great place for you to begin and grow your career. We have experienced, licensed professionals to help mentor you as well as guide your professional development. Better yet, you'll find a life/work balance (average 40-45 hours per week) that you'll appreciate. Plus, you're paid overtime for when you do exceed 40 hours per week. These are just a few of the reasons we've been named Top Workplaces (2019 – 2023).

As an Engineering Project Designer, you'll be working on a dedicated team and working closely with a Project Manager. Together, you'll serve long-term, loyal, national-brand clients helping to drive projects to completion. Your initial role will be to provide CAD drafting skills, assist in plan-graphics review, conduct quality control assessments, and to develop proficiency in site calculations and design (grading, drainage, sanitary). Project Designers can choose from a couple different career paths. One such path is a more technical path keeping them entrenched in engineering design (once licensed, you will become a Project Engineer). The other path is a more managerial path with promotions to Project Manager, Department Director, and Vice President. Both paths are available for you at Weihe Engineers.

Preferences

- Experience with AutoCAD
- Experience with AutoDesk Civil 3D is a plus (if not, we'll train you)
- Experience in site development projects is a plus
- Excellent accuracy and attention to detail
- Great work ethic
- Ability to multi-task efficiently
- Quick learner
- Very comfortable and excels in a fast-paced environment
- Customer-service minded
- Positive, proactive attitude
